

adapt_authoring module break-down

This document gives a brief outline of how the existing application may be split into modules.

Modules

adapt_authoring: root module

core: app-wide abstract classes/utilities

adapt: handles adapt output

assets: asset management

config: app configuration

frontend: front-end UI

lion: localisation utility (polyglot)

localauth: username/password authentication

localfs: filesystem storage

logger: message logging

mailer: emailing

mongo: MongoDB

permissions: permissions handling (mostly Express middleware)

roles: role management

server: Express app

tenants: tenant management

users: user management

File map

The below maps the existing source files to their new modules.
